

NOA Intelligence
Thinking Together.

The promptless intelligent companion for people juggling modern life.

A person is sitting at a desk with a computer monitor and keyboard. They appear to be looking at the screen with a stressed or overwhelmed expression. The desk is cluttered with various items, including a coffee cup and some papers. The background is dark, and the overall tone is somber and reflective of the text's message about digital fragmentation.

There is a challenge: Life is spread across too many systems

Users are

- juggling too many apps
- with disconnected decision points.

The result is fragmentation that drives frustration, decision fatigue, overwhelm, and lower output across life and work.

We need a way forward: Meet NOA

The Promptless Intelligent Companion

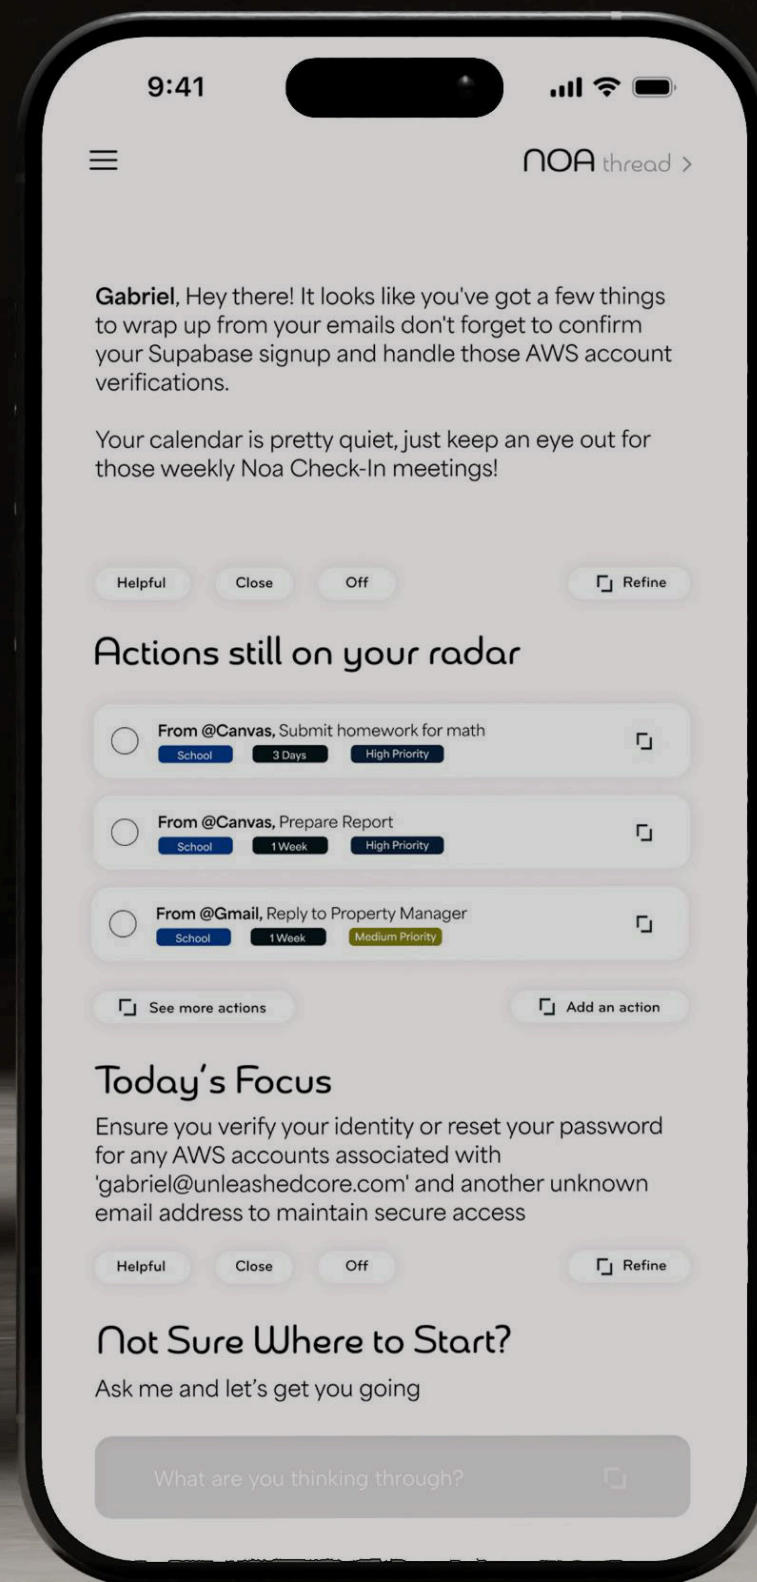

Created to give users an effortless, contextual, and interactive way to move through life.

Connect your favorite apps into one stream, so you no longer have to reconstruct context across different systems.

Effortless | Contextual | Interactive

NOA does not wait to be prompted.
It keeps your life in context and brings forward what matters.

Autonomously, NOA

- creates a daily report
- surfaces priorities
- suggests what to focus on
- tracks and notifies continuity across days

While letting users chat back for more context, new tasks, or redirection

In turn, leveraging Applied AI to

#1 Reducing decision fatigue.

#2 Cognitive burden.

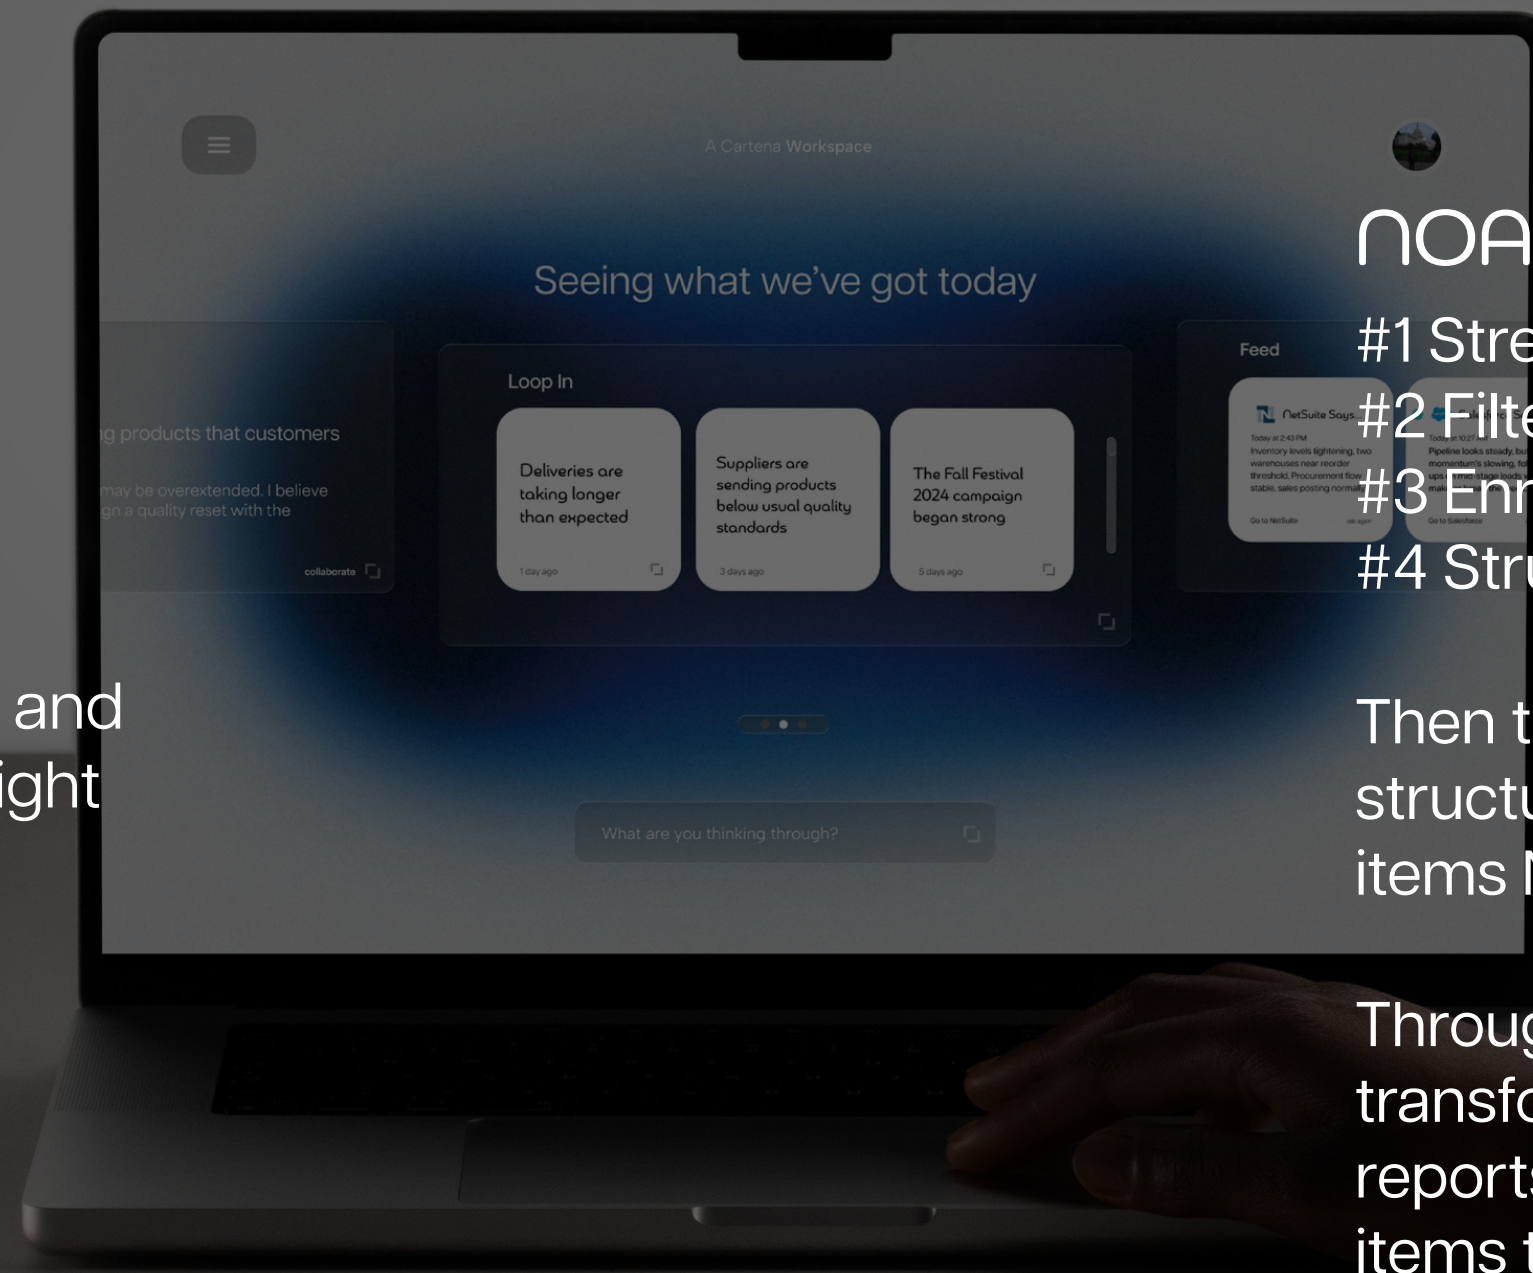

#3 Overwhelm.

NOA helps people who are juggling a lot move through life with more clarity, confidence, and forward momentum.

Preparing Data for AI

NOA improves output quality and lowers cost by giving AI the right context upfront.

NOA Data Pipeline:

- #1 Streams data
- #2 Filters data
- #3 Enriches data
- #4 Structures data

Then transform that context into structured reports and trackable action items NOA can follow over time.

Through a co-designed ML/AI pipeline that transforms that context into structured reports, decisions, and trackable action items that NOA can follow over time.

The Market is Ready for Promptless

Strategic Validation and Alliance

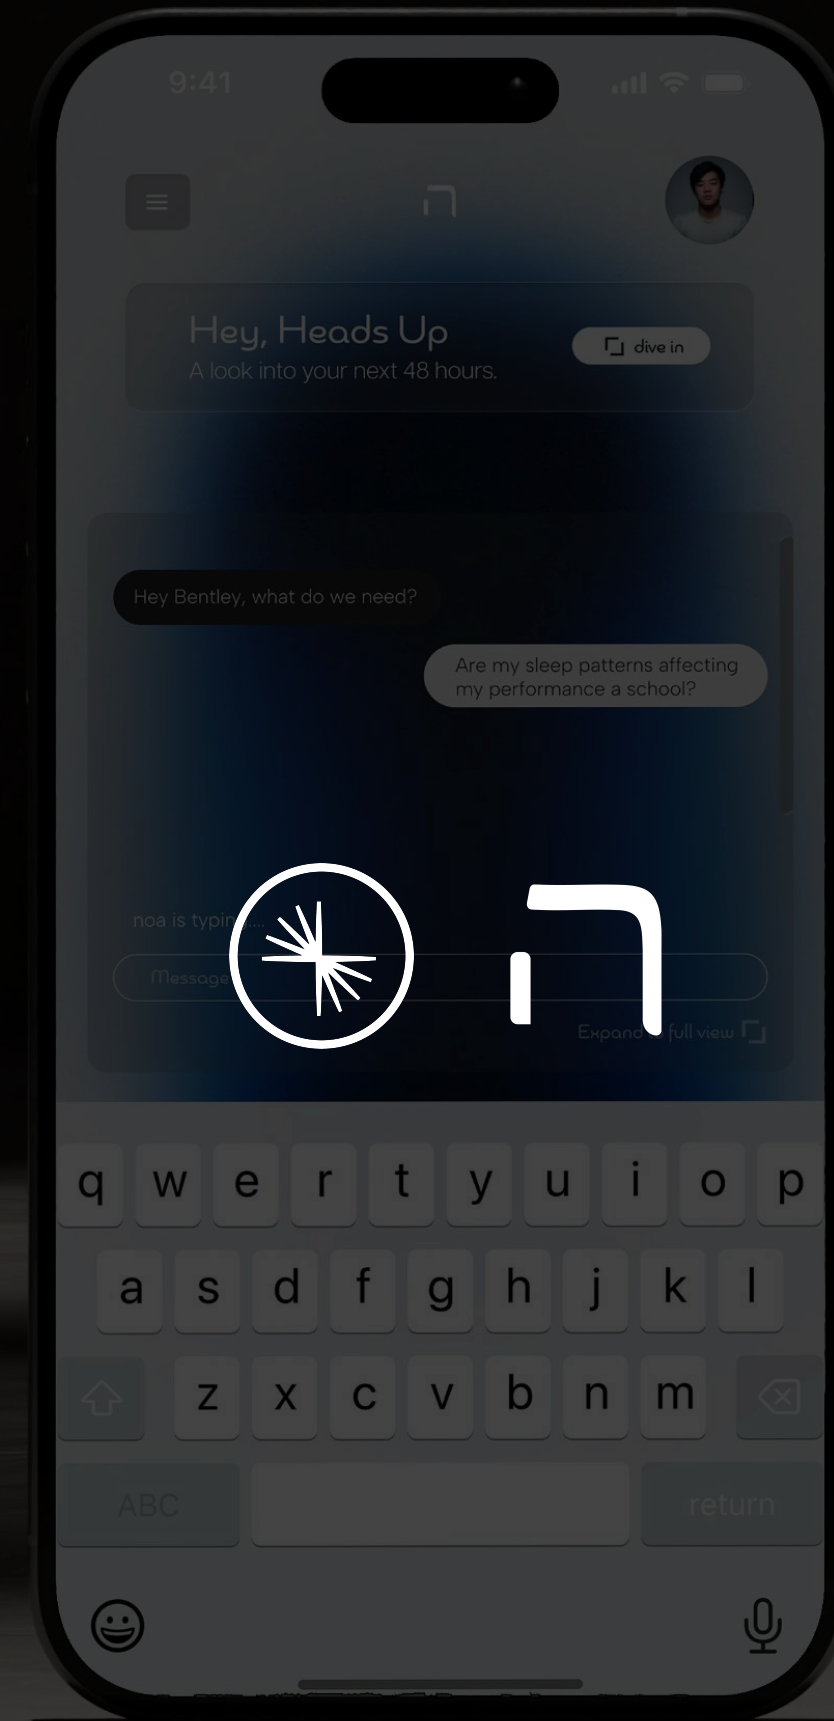

In partnership with Confluent, NOA is being shaped to make fragmented system activity more user-friendly, contextual, and actionable in the B2B Environment

Technical Validation

A USPTO-filed patent supports the broader technical direction behind NOA's contextual orchestration model.

Execution Validation

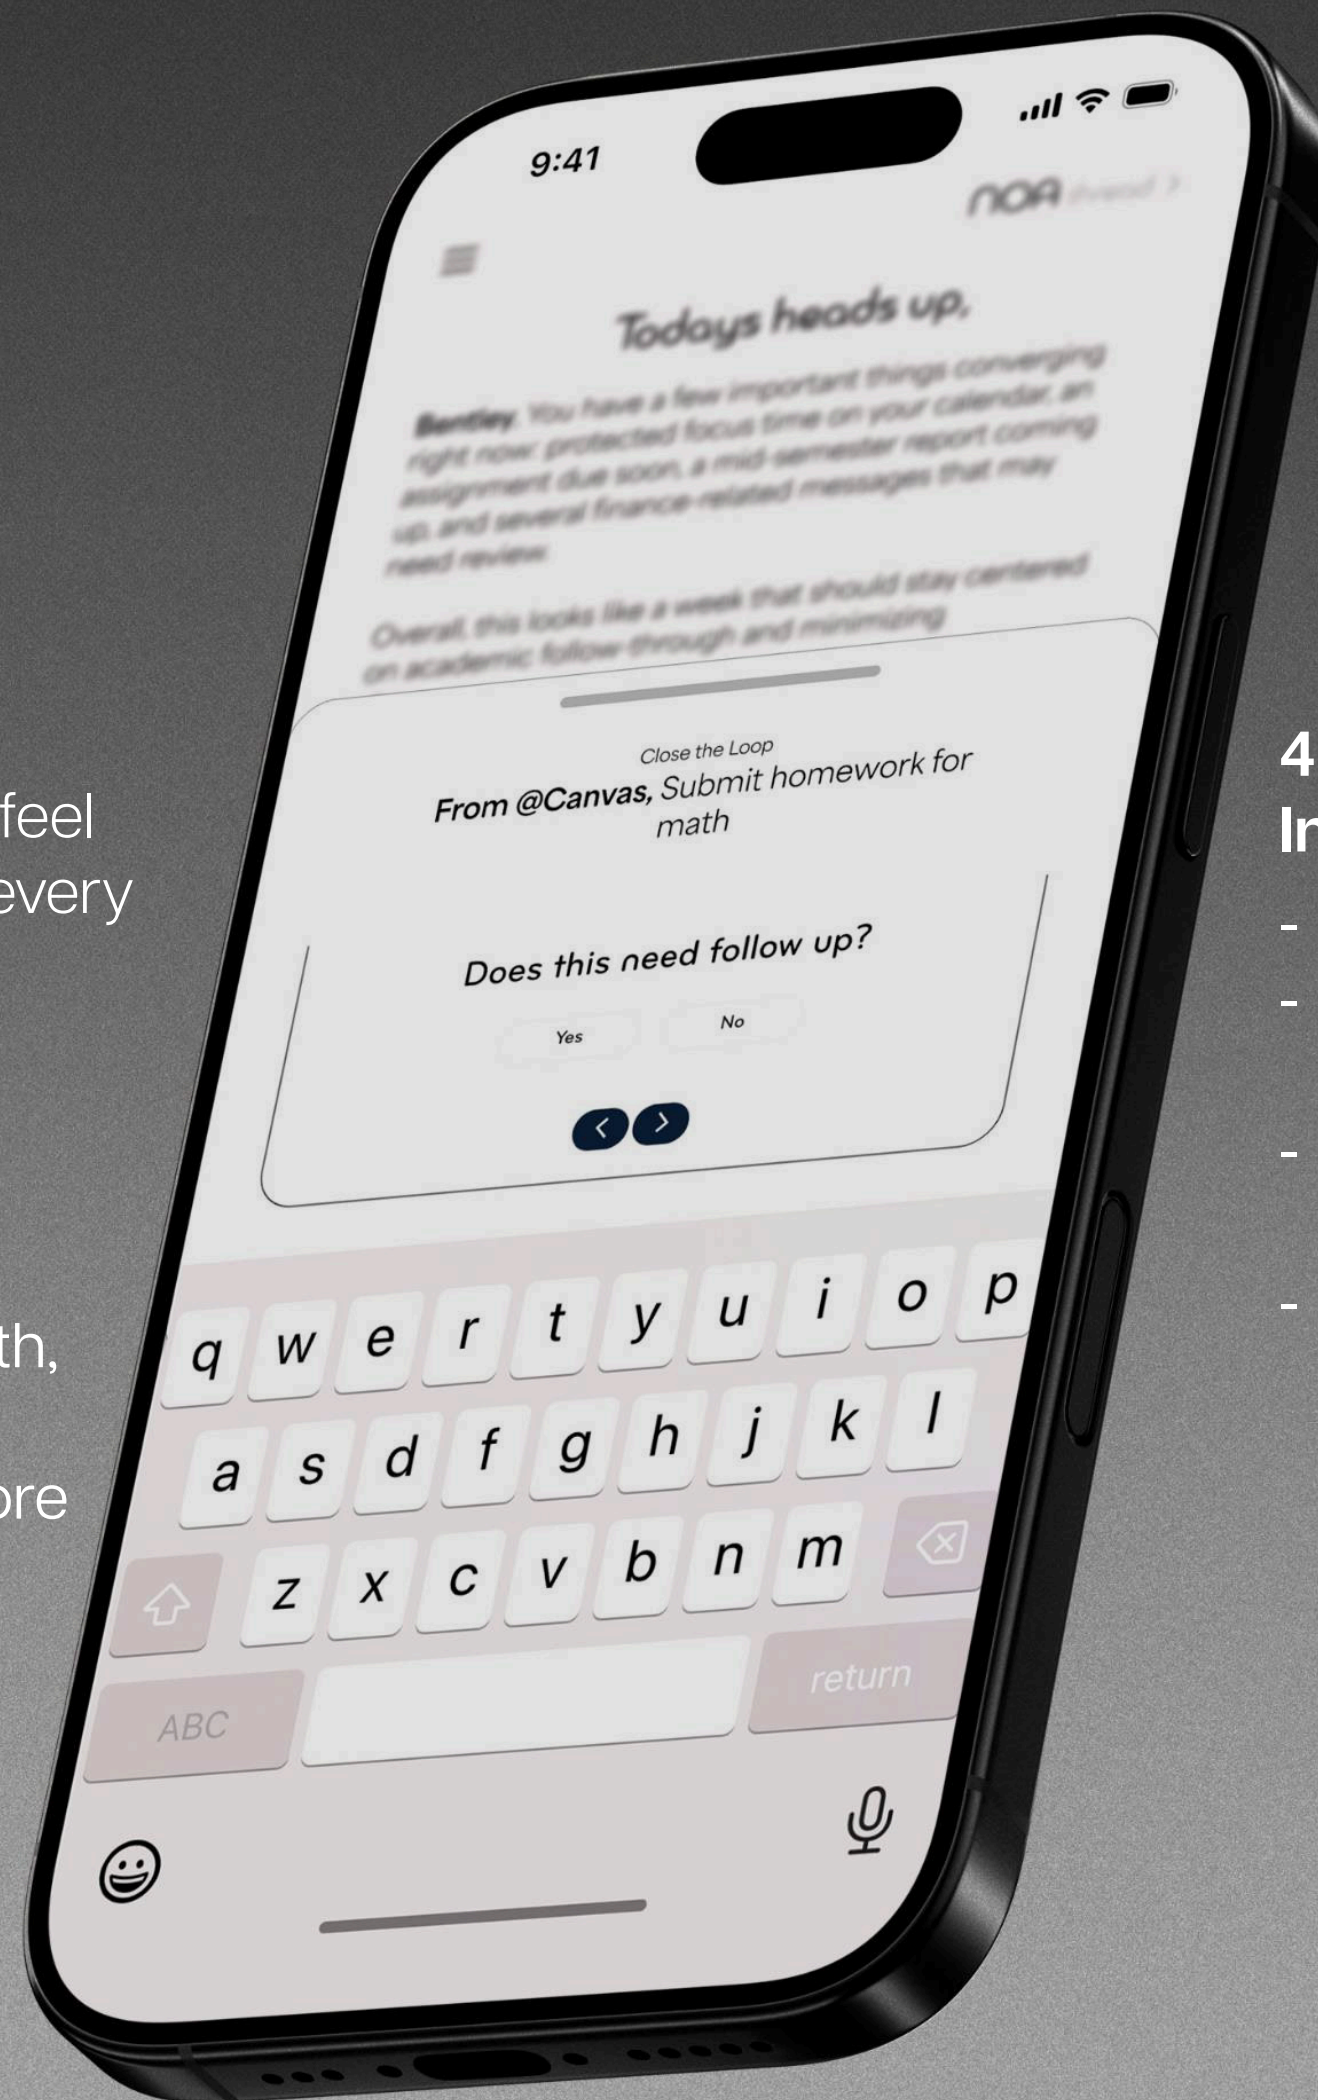

With a consumer launch targeted for end of April and enterprise adaptation underway, NOA is moving toward active deployment.

The first wedge: digitally intensive adults

Older Gen Z and millennials who already run life through apps, and feel the cost of fragmented decisions every day.

- app-native
- AI-open
- constantly connected
- managing life across work, health, planning, and social apps
- seeking more clarity without more effort

4 Statistics show a growing market Initial U.S. beachhead: 50–100M users

- 205.8M U.S. adults ages 18–64
- 63% of ages 18–29 are online almost constantly
- 54% of ages 30–49 are online almost constantly
- 53% of surveyed consumers are experimenting with or using gen AI

Launch Model: free to start,
paid for real-time intelligence

NOA Daily: Free for Users

Connect core apps, receive a daily report, and access limited reporting and interaction.

NOA Live: \$9.99/month

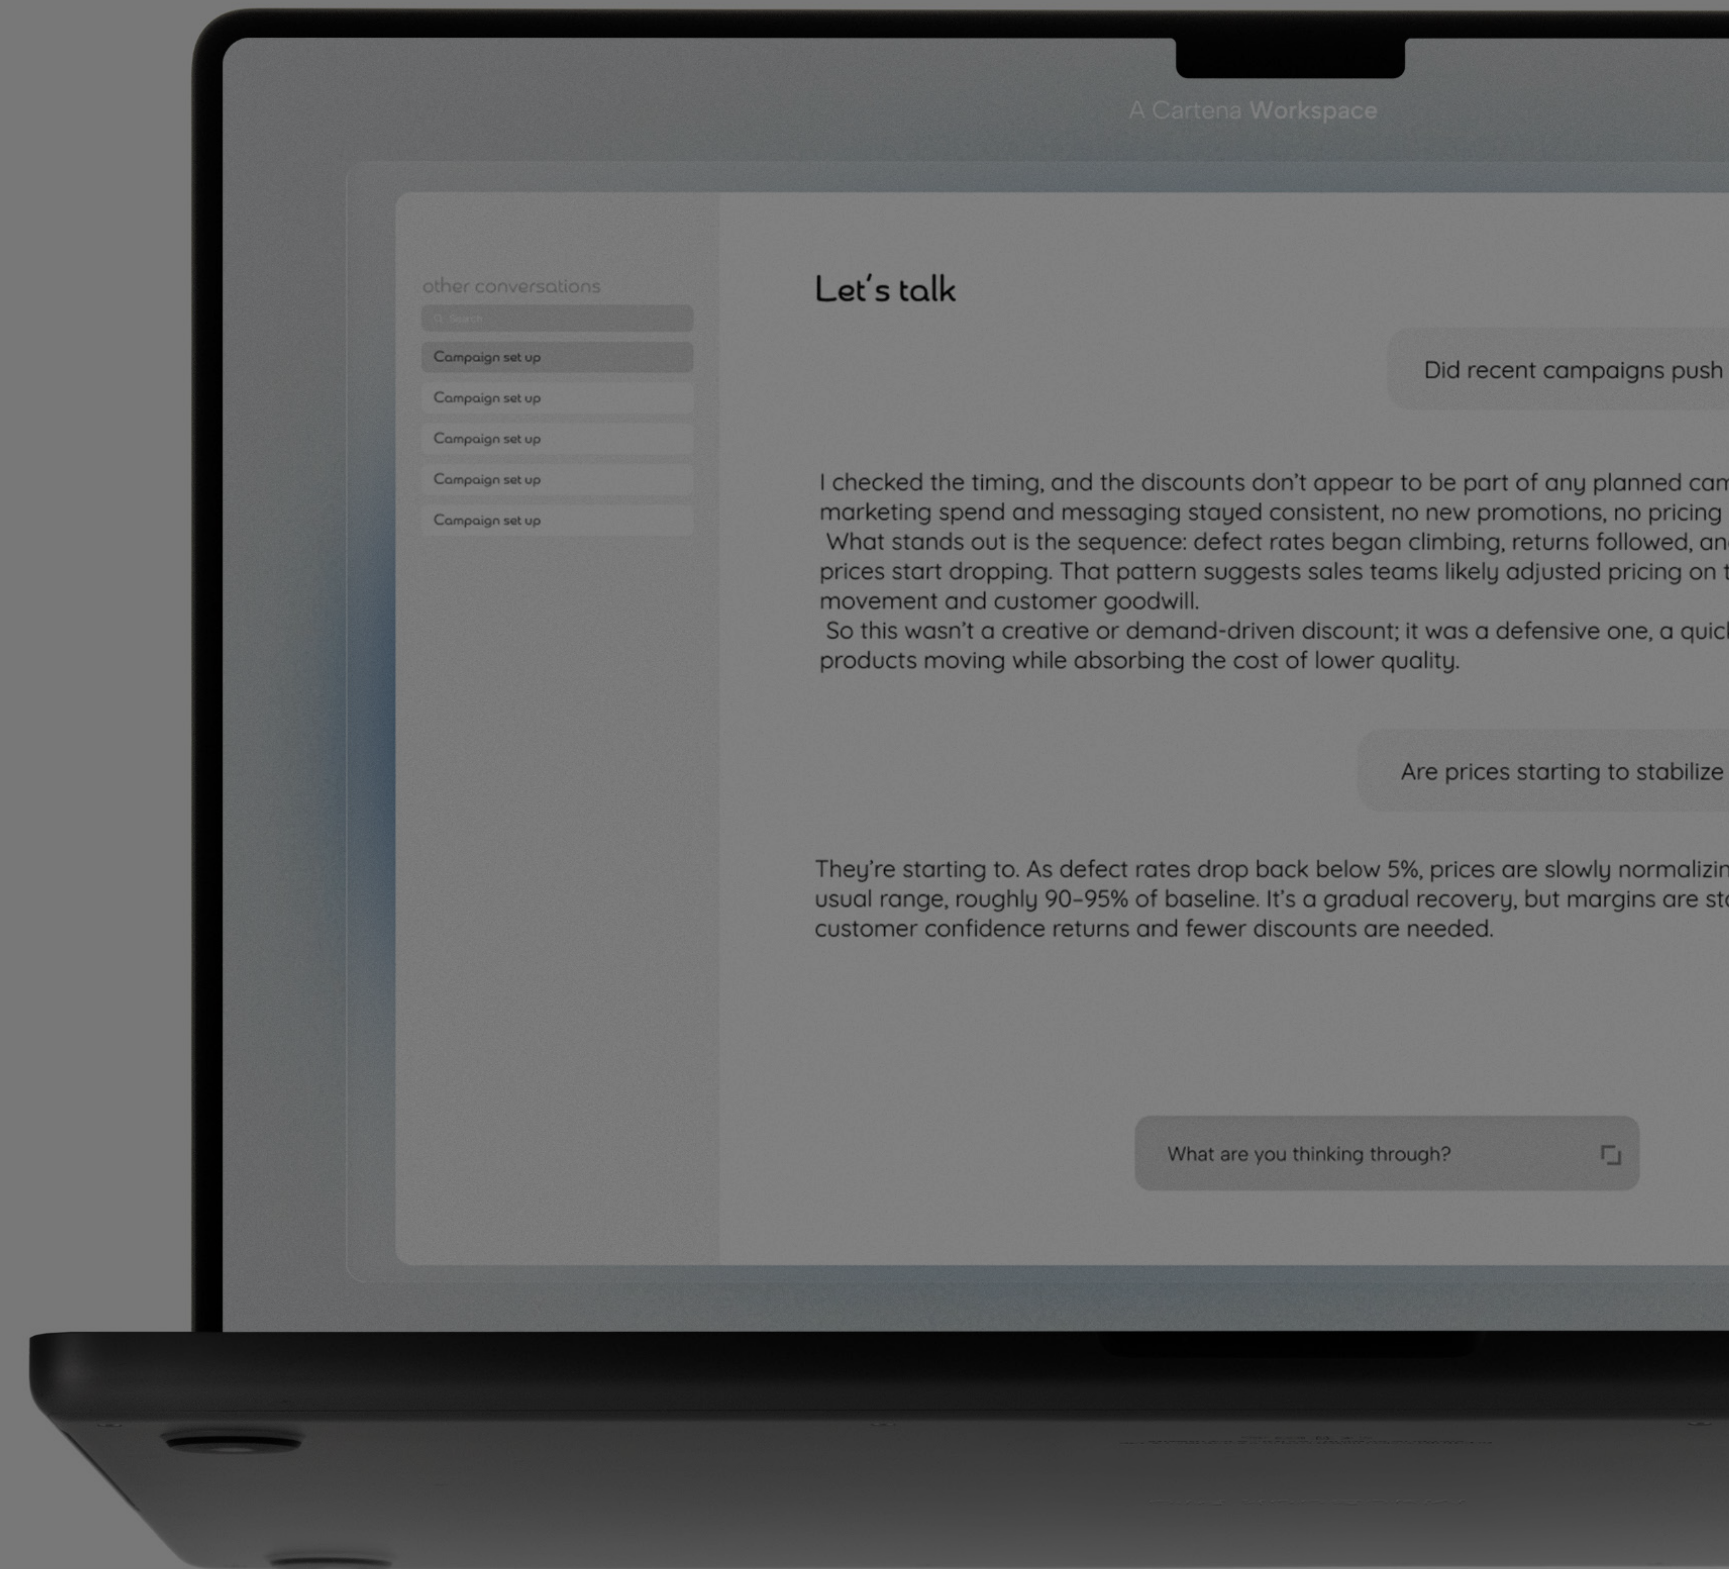

Unlock real-time reports when important things happen, richer promptless guidance, and deeper integrations across financial and health apps.

Our launch strategy combines direct ICP outreach on LinkedIn/X/Instagram with a creator-first campaign to build trust, onboard early users, and drive adoption among digitally intensive consumers.

The Future: from personal clarity to workforce clarity

NOA's future enterprise path is to bring workers a centralized, promptless intelligence layer that turns fragmented software activity into contextual action.

With Confluent, we see a path to making enterprise system complexity more human, more interactive, and more useful.

Capital Strategy

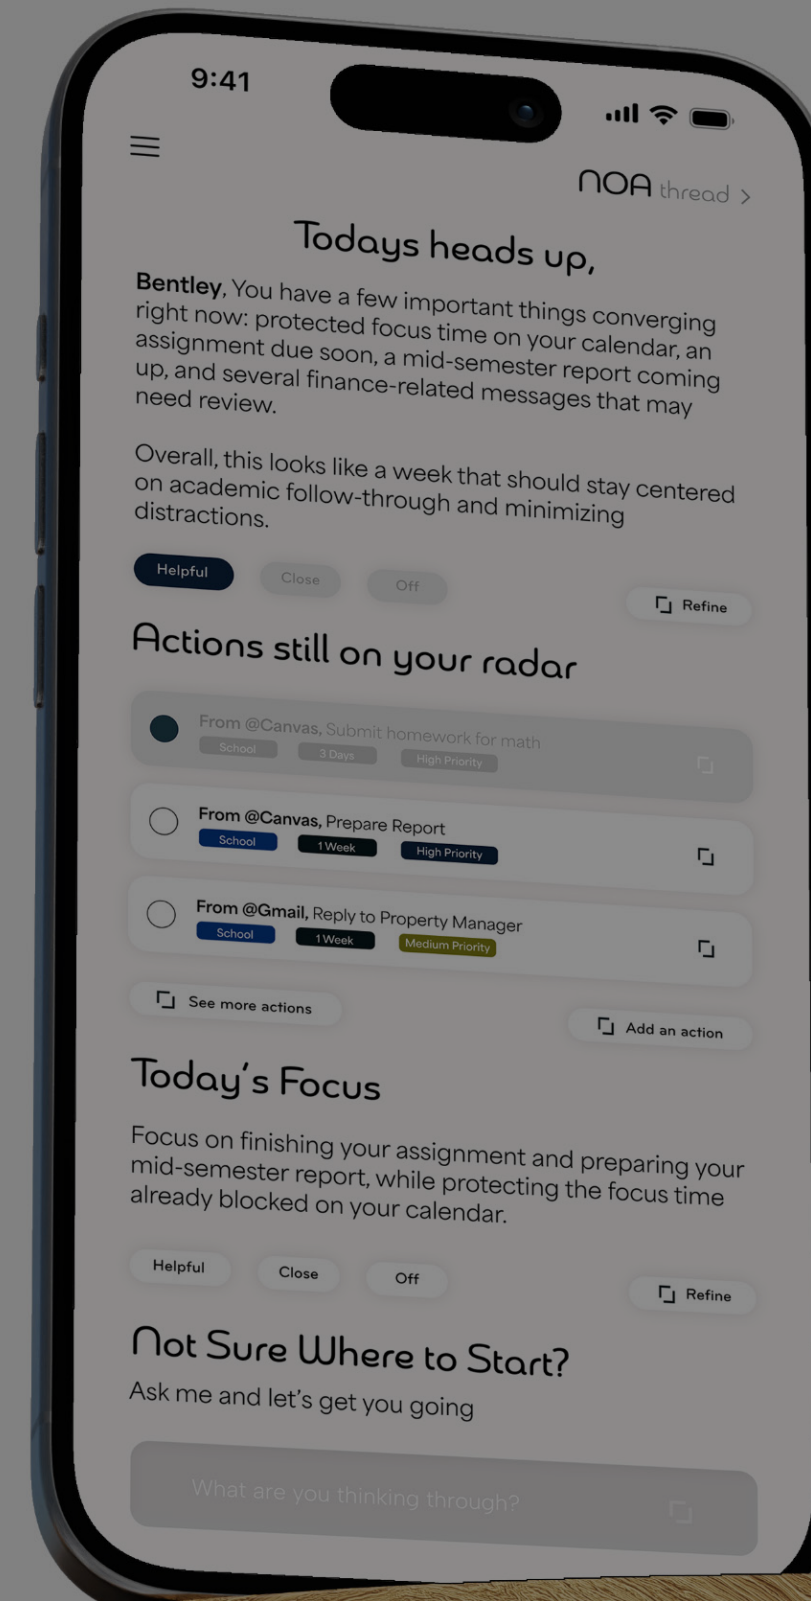

We are selectively engaging aligned investors and strategic partners to accelerate go-to-market, scale B2C adoption, and convert traction into stronger B2B leverage.

Areas of acceleration

- User acquisition and activation
- Retention and engagement systems
- Brand and category positioning
- Commercial infrastructure for enterprise expansion

Preferred Counterparties

- Strategic investors
- Distribution and ecosystem partners
- Long-term aligned capital

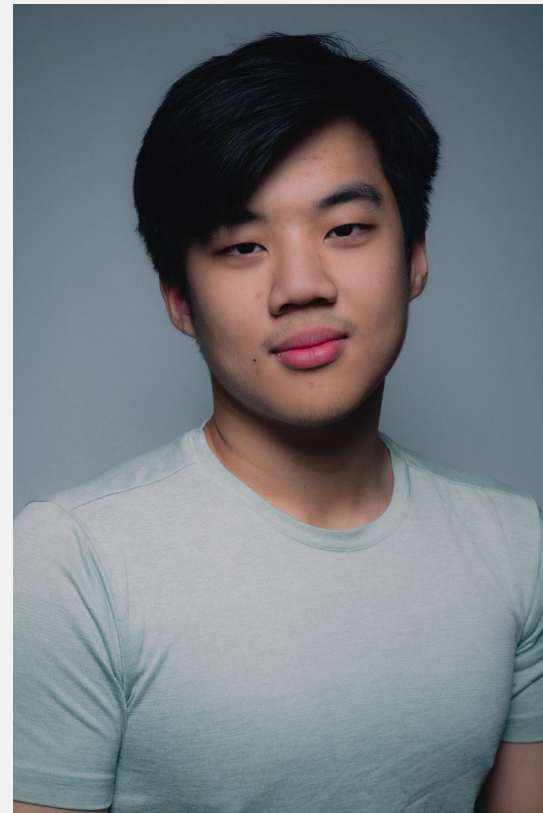

A team united by a belief

Quality of life improves when intelligence moves with you

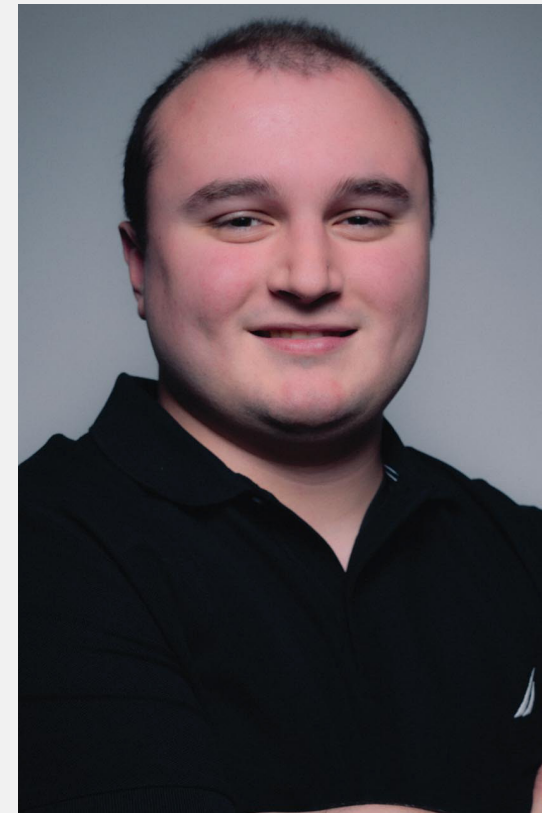

NOA is our response: contextual intelligence that helps people see clearly, act faster, and move forward without needing to reconstruct context every day.

Pablo Vazquez, CEO
Database design, data science, EdTech/SIS, and growth execution through Unleashed Core.

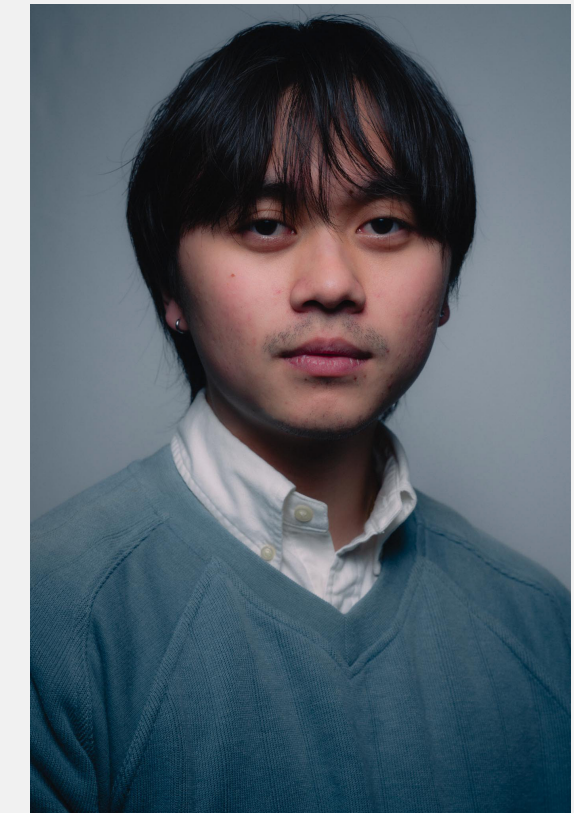

Bentley Aing, CTO
Streaming systems and pipeline architecture, developed alongside Confluent engineers.

Gabriel Antonio, Applied AI
Built the framework connecting NOA's agent layer to the database.

Alex Kalashnikov, Product
10+ years in UI development and product research.

Donald Bunsuy, Venture Development
Supports venture execution from concept through product and sales.
